# EGAT TELECOM

Electricity is a vital engine for growth, development and prosperity for the country.

EGAT presently builds, owns and operates several types and sizes of power plants across the country.

## Optical Composite Overhead Ground Wire (OPGW)

EGAT's Communication network was designed and built in the feature of OPGW which installed along transmission line across the whole country. OPGW is the overhead ground wire fill with optical fiber. Due to its installing location, OPGW network is a very high reliable network without any effects from power transmitting.

EGAT has its own Optical Fiber network of more than 10,000 km with 200 Substations as nodes which connecting the entire network across Thailand.
